ABSTRACT

Title of the Research: Account Management System for the Senior High School Program

Authors: Mark Anthony A. Ozaeta

Degree: Master in Information Technology

Date of Completion: May, 2017

Keywords: Account Management, Web Information System, Senior High School

---

Tuition collection plays an important role in school management as it assists with the funding of faculty, staff, and facilities among others. The opening of the senior high school program has led to different challenges in account management especially that the Philippine government has started its government subsidy in a form of voucher program. The proponent aims to develop an account management system that will address this arising challenge. The proposed system, upon implementation, will be an integral part of a school's operation.

The account management system for the senior high school program will be developed as a web information system using PHP, CSS and MySQL. The proposed account management system (AMS) for the senior high school program will also handle the generation of billing statements, creation of flexible tuition payment schemes, computation of monthly dues and creation of reports needed by the Accounting Office.

Upon implementation, the system will provide numerous support that will respond to the needs as well as the demands of different beneficiaries like the school management, accounting officers, parents and students.

ACCOUNT MANAGEMENT SYSTEM FOR THE SENIOR HIGH SCHOOL PROGRAM
